

VIPER SILCONE GREASE

Lubricant and heat sink

COMPETITIVE POINTS OF DIFFERENCE

Our Silicone Grease is the lubricant of choice for use in food equipment, water fixtures and heat generating appliances because silicones are compatible with most plastics, rubber, leather, composite fibres and all metals. Silicone Grease is waterproof, has a stable consistency with low volatility, high chemical resistance, and its high dielectric strength allows for the safe lubrication of electromechanical devices.

APPLICATION

Silicone Grease is a safe, environmentally friendly alternative to petroleum-based products.

DIRECTIONS

Apply to lubricate and protect equipment and mechanical devices

FRIDGEY FACTS

- Safe for use on electro-mechanical devices such as damper motors and actuators
Protects electrical connections and components from water, corrosion and oxidation (for example coating/protecting battery terminals)
- Silicone Grease withstands greater temperature swings than petroleum greases, from freezers to pizza ovens
- NSF registered H1 for incidental food contact and safe to lubricate anything

Part number: RT910T

Certified

NSF, EPA and Kosher
Certified, biodegradable
and eco-friendly

Food Safe

Approved for use
in and around food
processing areas

All Purpose

Lubricant & Heat sink

Protectant

Water-resistant formula
protects surfaces from
corrosion
